Subject: RE: APPROVED RESPONSE for The Guardian RE: Superfund Involvement with Mine

I talked to Nancy Cohen about this. The reporter had two categories of questions, one about mine tailings, and the other about whether we considered making this site a Superfund site. Our answer is completely silent on the second category of questions. Nancy didn't know why we were silent. Can someone find out, before I send this? Also, I think the reporter was writing for last Monday. Do we know that he still needs this? Sorry to ask, George

Subject: Fw: APPROVED RESPONSE for The Guardian RE: Superfund Involvement with Mine
Importance: High

Hi George,

We really want to close this out. Everything is approved by all necessary parties. Can someone in OMR send this to the reporter? Thanks!

Subject: APPROVED RESPONSE for The Guardian RE: Superfund Involvement with Mine

Hi Liz,

This approved response will go back to the reporter. We're also adding it to the Qs and As to be posted to the website. Would you like to see all of the approved responses before they are sent out? Thanks!

OUTLET: The Guardian

REPORTER: Karl Mathiesen

INQUIRY: On the general state of tailings dams and mines. How many such storage facilities are there across the country? How does the EPA monitor the maintenance and condition of mines and dams that are holding contaminated water? Are abandoned mines, like Gold King, monitored?

It has been reported that the EPA has been trying to designate the area as a superfund area for some time. When was the idea first floated? Why was it unsuccessful? Does the EPA believe the spill would have occurred regardless of the lack of superfund designation? Would that have changed the way the clean up was undertaken (ie would there have been more money available and therefore less likelihood of a failure?)?

RESPONSE: EPA routinely monitors hardrock mine sites that are placed on the Superfund National Priorities List (NPL). However, EPA does not maintain records of the number of mines or tailings dams in the US. Tailings dam safety falls under the jurisdiction of State Dam Safety Agencies, and the Federal Land Management Agencies (e.g., Bureau of Land Management, Fish and Wildlife Service, National Park Service and the Forest Service) that have jurisdiction for monitoring the dams on federal lands. EPA does investigate or respond to incidents that are brought to our attention. In August 1994, the EPA report entitled "Technical Report: Design and Evaluation of Tailings Dams" noted that "EPA estimates that there may be several thousand tailings impoundments associated with active non-coal mining, and tens of thousands of inactive or abandoned impoundments."
